## NOTES ON METHODOLOGY

Since 1998, the State Statistical Office of the Republic of Macedonia has maintained a Evidence of business subjects and a Evidence of their units, based on the Law on National Classification of Economic Activities.

The Evidence contains all legal entities on the territory of the Republic of Macedonia which were previously registered at competent bodies (district commercial Courts, Ministry of science etc.), based on the Law of enterprises Company Act, the Law on Associations of Citizens and Foundations, Law of trade companies and so on.

Business entities receive a "placement report of business subjects to main activity", and the State Statistical Office assigns and grants a registration number, which is a unique and permanent code number for every business entity. According to the code number, every entity from the Evidence is traced in all statistical research, Customs, Payment Operations Office, National Bank, Republic Employment Office, Disability and Retirement Insurance Fund etc.

Besides newly-established business entities, the Evidence includes changes in the situation of already registered entities (changes in head office, type of business entities, type of ownership, main activity, termination of business subject activity etc.).
